

Error Codes - v1.3-R

- [4Sight Server](#)
- [4Sight ML](#)

4Sight Server

User	Change Password	400	Old password is wrong	Invalid Request	User password cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	Verify whether the Old password is proper while changing the password for the user
Alerts	Create Alert	400	Invalid Request Body : <error message>	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Alerts	Create Alert	400	Invalid dataset	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the dataset name in the config
Alerts	Create Alert	400	Invalid Alert name	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid Alert name
Alerts	Create Alert	400	Alert name already exists	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide different name for Alert
Alerts	Create Alert	400	Invalid time range	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please pass valid time range. Refer API documentation for details
Alerts	Create Alert	400	Invalid query:<query Name>	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid queries as mentioned in Query syntax
Alerts	Create Alert	400	Invalid evaluate interval	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid evaluate interval
Alerts	Create Alert	400	Invalid email recipients	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid email recipients
Alerts	Create Alert	400	Invalid cc recipients	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid cc recipients
Alerts	Create Alert	400	Invalid bcc recipients	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid bcc recipients

Alerts	Create Alert	400	Invalid notify interval	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid notify interval
Alerts	Delete Alert	400	Invalid Query Parameters	Invalid Request	Alert details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the query parameters. Refer API documentation for details
Alerts	Export Alert	400	Invalid Request Body : <error message>	Invalid Request Body	Alert cannot be exported	The log directory and log file name will be defined in "4sight.cfg"	Select the alert to be exported.
Alerts	Get Alert details	400	Invalid Query Parameters	Invalid Request	Alert details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the query parameters. Refer API documentation for details
Alerts	Import Alert	400	Invalid Request Body	Invalid Request Body	Alert cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Please provide alert in a proper json format.
Alerts	Update Alert	400	Invalid Query Parameters	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please pass valid Query parameters. Refer API documentation for details
Alerts	Update Alert	400	Invalid Request Body : <error message>	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Alerts	Update Alert	400	Invalid dataset	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Verify the dataset name in the config
Alerts	Update Alert	400	Invalid Alert name	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid Alert name
Alerts	Update Alert	400	Alert name already exists	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide different name for Alert

Alerts	Update Alert	400	Invalid time range	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please pass valid time range. Refer API documentation for details
Alerts	Update Alert	400	Invalid query:<query Name>	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid queries as mentioned in Query syntax
Alerts	Update Alert	400	Invalid evaluate interval	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid evaluate interval
Alerts	Update Alert	400	Invalid email recipients	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid email recipients
Alerts	Update Alert	400	Invalid cc recipients	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid cc recipients
Alerts	Update Alert	400	Invalid bcc recipients	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid bcc recipients
Alerts	Update Alert	400	Invalid notify interval	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid notify interval
Alerts	Create Alert	500	SQLAlchemyError : <error message>	SQLAlchemyError occured while creating the Alert	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	verify the Database and table schema
Alerts	Delete Alert	500	SQLAlchemyError : <error message>	SQLAlchemyError	Alert details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Alerts	Delete Multiple Alert	500	SQLAlchemyError : <error message>	SQLAlchemyError	Alert details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Alerts	Get Alerts Count	500	SQLAlchemyError : <error message>	SQLAlchemyError	Alerts count cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Alerts	Import Alert	500	SQLAlchemyError : <error message>	SQLAlchemyError	Alert cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Alerts	Update Alert	500	SQLAlchemyError : <error message>	SQLAlchemyError occured while creating the Alert	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	verify the Database and table schema
Dashboard	Create Dashboard	400	Invalid Filter : <Filter name>	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid filters
Dashboard	Update Dashboard	400	Invalid Filter : <Filter name>	Invalid Request	Dashboard cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid filters
Dashboards	create Dashboard	400	Invalid Dashboard name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_' in between	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid Dashboard name

Dashboards	Create Dashboard	400	Invalid Request Body : <error message>	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Create Dashboard	400	Invalid dashboard name	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid Dashboard name
Dashboards	Create Dashboard	400	Dashboard name already exists	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide different Dashboard name
Dashboards	Create Dashboard	400	Invalid start time	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Create Dashboard	400	Invalid end time	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Create Dashboard	400	Invalid refresh interval	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Delete Dashboard	400	Invalid Query Parameters	Invalid Request	Dashboard cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Dashboards	Export Dashboard	400	Invalid Request Body : <error message>	Invalid Request	Dashboard cannot be exported	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Get Dashboard Details	400	Invalid Query Parameters	Invalid Request	Dashboard details cannot be fetched	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Import Dashboard	400	Invalid Request Body : <error message>	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in " 4sight.cfg"	Verify the config schema
Dashboards	Import Dashboard	400	Dashboard name already exists	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in " 4sight.cfg"	Verify the dashboard name in config
Dashboards	Import Dashboard	400	Invalid Widget	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in " 4sight.cfg"	Verify the widget name in config
Dashboards	Update Dashboard	400	Invalid Query Parameters	Invalid Request	Dashboard cannot be updated	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Update Dashboard	400	Invalid Request Body : <error message>	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Update Dashboard	400	Invalid dashboard name	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in " 4sight.cfg"	Provide valid Dashboard name
Dashboards	Update Dashboard	400	Dashboard name already exists	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in " 4sight.cfg"	Provide different Dashboard name

Dashboards	Update Dashboard	400	Invalid start time	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Update Dashboard	400	Invalid end time	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Update Dashboard	400	Invalid refresh interval	Invalid Request	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Update Dashboard	400	Invalid Dashboard name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_' in between	Invalid Request	Dashboard cannot be Updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid Dashboard name
Dashboards	Create Dashboard	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Dashboards	Delete Dashboard	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dashboard cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Dashboards	Get Dashboard Count	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dashboards count cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Dashboards	Update Dashboard	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dashboard cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Create Dataset	400	Invalid Request Body : <error message>	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Datasets	Create Dataset	400	Dataset name already exists	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide different Dataset name
Datasets	Create Dataset	400	Alias values has to be unique. Alias "<alias_value>" already exists	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide unique alias values
Datasets	Create Dataset	400	Invalid Filter:<Filter Name>	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid filters as mentioned in Filter syntax
Datasets	Create Dataset	400	Invalid Dataset name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_', in between	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid Dataset name
Datasets	Delete Dataset	400	Invalid Query Parameters	Invalid Request	Dataset details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Delete Dataset	400	Unable to delete dataset. Dataset is used in Widgets	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the dataset is used in Widgets then it can't be deleted. If the dataset has to be deleted, then delete all the associated Widgets before deleting the dataset
Datasets	Delete Dataset	400	Unable to delete dataset. Dataset is used in Searches	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the dataset is used in Searches then it can't be deleted. If the dataset has to be deleted, then delete all the associated Searches before deleting the dataset
Datasets	Delete Dataset	400	Unable to delete dataset. Dataset is used in Prediction Models	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the dataset is used in Prediction Models then it can't be deleted. If the dataset has to be deleted, then delete all the associated Prediction Models before deleting the dataset
Datasets	Export Dataset	400	Invalid Request Body : <error message>	Invalid Request Body	Dataset cannot be exported	The log directory and log file name will be defined in "4sight.cfg"	Select the dataset to be exported.
Datasets	Get Dataset Columns	400	Invalid Query Parameters	Invalid Request	Dataset details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Datasets	Get Dataset Details	400	Invalid Query Parameters	Invalid Request	Dataset details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Get Index Columns	400	Invalid Query Parameters	Invalid Request	Columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Import Dataset	400	Invalid Request Body	Invalid Request Body	Dataset cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Pease provide dataset in a proper json format.
Datasets	Update Dataset	400	Invalid Query Parameters	Invalid Request	Dataset cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Update Dataset	400	Invalid Request Body : <error message>	Invalid Request	Dataset cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Update Dataset	400	Alias values has to be unique. Alias "<alias_value>" already exists	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide unique alias values
Datasets	Update Dataset	400	Dataset name already exists	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide different name for Dataset
Datasets	Update Dataset	400	Invalid Filter:<Filter Name>	Invalid Request	Dataset cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid filters as mentioned in Filter syntax
Datasets	Update Dataset	400	Invalid Dataset name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_', in between	Invalid Request	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid Dataset name

Datasets	Create Dataset	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dataset cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Delete Dataset	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Get Datasets Count	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dataset count cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Get Index Columns	500	No data present in the selected index	Elasticsearch Exception	Columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Datasets	Get Index Columns	500	The selected index does not exist	Elasticsearch Exception	Columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Datasets	Get Index Columns	500	ElasticsearchException - <error message>	Elasticsearch Exception	Columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Datasets	Import Dataset	500	SQLAlchemyError : <error message>	SQLAlchemyError	Datasets cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Search Datasets	500	SQLAlchemyError : <error message>	SQLAlchemyError	Search results cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Update Dataset	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dataset cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Datasets	Delete Multiple Dataset	400	Invalid Request Body	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Delete Multiple Dataset	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dataset details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Policy	Save cookie policy	400	Invalid Request Body : <error message>	Invalid Request	Cookie policy cannot be updated for user	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Prediction	Is Model trained /Check model trained	400	Invalid Query Parameters	Invalid Request	Cannot check the given model is trained or not	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the query parameters. Refer API documentation for details
Prediction Models	Create Prediction Models	400	Invalid Request Body : <error message>	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Create Prediction Models	400	Invalid prediction model name	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid name for Prediction Model
Prediction Models	Create Prediction Models	400	Prediction Model name already exists	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide different name for Prediction Model
Prediction Models	Create Prediction Models	400	Insufficient input params. Choose minimum one input params	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide minimum one input params
Prediction Models	Create Prediction Models	400	Training data set should be between 60 and 90 only	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid value for training dataset
Prediction Models	Create Prediction Models	400	Invalid scheduled interval	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid interval
Prediction Models	Create Prediction Models	400	Batch size should be between 2 and 500 only	Invalid Request	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid batch size
Prediction Models	Delete Prediction Models	400	Invalid Query Parameters	Invalid Request	Prediction Model cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Export Prediction Model	400	Invalid Request Body : <error message>	Invalid Request	Prediction Models cannot be exported	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Prediction Models	Get available metrices for algorithm	400	Invalid Query Parameters	Invalid Request	Metrices for algorithm cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Get available metrices for algorithm	400	Invalid Algorithm	Invalid Request	Metrices for algorithm cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Provide valid algorithm
Prediction Models	Get metrices value for a model	400	Invalid Query Parameters	Invalid Request	Model metrices values cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Get Prediction Model details	400	Invalid Query Parameters	Invalid Request	Model details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Get Prediction Model details from ML server	400	Invalid Query Parameters	Invalid Request	Model details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Import Prediction Model	400	Invalid Request Body : <error message>	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the config schema
Prediction Models	Import Prediction Model	400	Prediction Model name already exists	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Provide valid name for Prediction Model
Prediction Models	Import Prediction Model	400	Invalid dataset	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the dataset name in the config
Prediction Models	Import Prediction Model	400	Invalid Dataset Column	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the column names in the config
Prediction Models	Is Model Running	400	ML is not enabled	Invalid Request	Model details about training cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the value of the property IS_ML_ENABLED in 4sight.cfg file

Prediction Models	Is Model Running	400	Invalid Query Parameters	Invalid Request	Model details about training cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Submit model for training	400	ML is not enabled	Invalid Request	Model cannot be submitted for training	The log directory and log file name will be defined in "4sight.cfg"	Check the value of the property IS_ML_ENABLED in 4sight.cfg file
Prediction Models	Train Model	400	ML is not enabled	Invalid Request	Model cannot be trained	The log directory and log file name will be defined in "4sight.cfg"	Check the value of the property IS_ML_ENABLED in 4sight.cfg file
Prediction Models	Update Prediction Models	400	Invalid Query Parameters	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Update Prediction Models	400	Invalid Request Body : <error message>	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Prediction Models	Update Prediction Models	400	Invalid prediction model name	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide valid name for Prediction Model
Prediction Models	Update Prediction Models	400	Prediction Model name already exists	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide different name for Prediction Model
Prediction Models	Update Prediction Models	400	Insufficient input params. Choose minimum one input params	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide minimum one input params
Prediction Models	Update Prediction Models	400	Training data set should be between 60 and 90 only	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide valid value for training dataset
Prediction Models	Update Prediction Models	400	Invalid scheduled interval	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide valid interval
Prediction Models	Update Prediction Models	400	Batch size should be between 2 and 500 only	Invalid Request	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide valid batch size
Prediction Models	Create Prediction Models	500	SQLAlchemyError : <error message>	SQLAlchemyError	Prediction Model cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema

Prediction Models	Delete Prediction Models	500	SQLAlchemyError : <error message>	SQLAlchemyError	Prediction Model cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get available algorithms	500	SQLAlchemyError : <error message>	SQLAlchemyError	Algorithms cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get available functions	500	SQLAlchemyError : <error message>	SQLAlchemyError	Functions for input params cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get available metrices for algorithm	500	SQLAlchemyError : <error message>	SQLAlchemyError	Metrices for algorithm cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get metrices value for a model	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model metrices values cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get Prediction Model details	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get Prediction Model details from ML server	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get Prediction Models	500	SQLAlchemyError : <error message>	SQLAlchemyError	Prediction Models list cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Get Prediction Models count	500	SQLAlchemyError : <error message>	SQLAlchemyError	Prediction Model count cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Import Prediction Model	500	SQLAlchemyError : <error message>	SQLAlchemyError	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Prediction Models	Update Prediction Models	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model details cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Predictions	Get Prediction Model Params By Id	500	SQLAlchemyError : <error message>	SQLAlchemyError	Param value cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Predictions	Get Prediction Model Params By Id	400	Invalid Query Parameters	Invalid Request	Prediction details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Create Search	400	Invalid Request Body : <error message>	Invalid Request	Search data cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Search	Create Search	400	Invalid Search name	Invalid Request	Search data cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid Search name
Search	Create Search	400	Search name already exists	Invalid Request	Search data cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide different Search name
Search	createSearch	400	Invalid Search name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_', in between	Invalid Request	search cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid search name
Search	Delete Search	400	Invalid Query Parameters	Invalid Request	Search details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Export Search	400	Invalid Request Body : <error message>	Invalid Request	Search cannot be exported	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Get Dataset Columns	400	Invalid Query Parameters	Invalid Request	Columns details cannot be fetched for Search	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Get Search Details	400	Invalid Query Parameters	Invalid Request	Search details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Import Search	400	Invalid Request Body : <error message>	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the config schema
Search	Import Search	400	Search name already exists	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Provide different Search name in the config

Search	Import Search	400	Invalid dataset	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the dataset name in the config
Search	Search By Filter	400	Invalid Request Body : <error message>	Invalid Request	Search data cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Update Search	400	Invalid Request Body : <error message>	Invalid Request	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Update Search	400	Invalid Search name	Invalid Request	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide valid Search name
Search	Update Search	400	Search name already exists	Invalid Request	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide different Search name
Search	Update Search	400	Invalid Query Parameters	Invalid Request	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	updateSearch	400	Invalid Search name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_' in between	Invalid Request	search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid search name
Search	Create Search	500	SQLAlchemyError : <error message>	SQLAlchemyError	Search cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Search	Delete Multiple Search	500	SQLAlchemyError : <error message>	SQLAlchemyError	Search details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Search	Delete Search	500	SQLAlchemyError : <error message>	SQLAlchemyError	Search details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Search	Get Search Count	500	SQLAlchemyError : <error message>	SQLAlchemyError	Searches count cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema

Search	Import Search	500	SQLAlchemyError : <error message>	SQLAlchemyError	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Search	Search By Filter	500	ElasticsearchException - <error message>	Elasticsearch Exception	Search data cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Search	Update Search	500	SQLAlchemyError : <error message>	SQLAlchemyError	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Settings	Get Logo	400	Invalid Query Parameters	Invalid Request	Logo details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Settings	Save Footer	400	Invalid Request Body : <error message>	Invalid Request	Footer settings cannot be saved	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Settings	Save Logo	400	<error message>	Invalid Request	Logo settings cannot be saved	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Settings	Save Theme	400	Invalid Request Body : <error message>	Invalid Request	Theme settings cannot be saved	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Settings	SaveRegex	400	Invalid Regex pattern.	Invalid Request	Invalid Request body.	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid regex.
Settings	Save Footer	500	SQLAlchemyError : <error message>	SQLAlchemyError	Footer settings cannot be saved	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Settings	Save Logo	500	SQLAlchemyError : <error message>	SQLAlchemyError	Logo settings cannot be saved	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema

Settings	Save Theme	500	SQLAlchemyError : <error message>	SQLAlchemyError	Theme settings cannot be saved	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Settings	SaveRegex	500	SQLAlchemyError : <error message>	SQLAlchemyError	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
User	Update Profile	400	Profile is not updated check the details given	Invalid Request	User profile details cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	Please verify the given details for the profile updation whether the character constraints is met provided by umfp
User	Change Password	400	Invalid Request Body	Invalid Request	User password cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
User	Change Password	400	Password not updated check the details given	Invalid Request	User password cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	Please verify the given details for the change password whether the character constraints is met provided by umfp
User	Update Profile	400	Invalid Request Body	Invalid Request	User profile details cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
User	Change Password	500	Unable to connect to the server	Internal server error	User password cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	Verify whether the UMFP server is up and running
User	Update Profile	500	Unable to connect to the server	Internal server error	User profile details cannot be changed	The log directory and log file name will be defined in "4sight.cfg"	Verify whether the UMFP server is up and running
User Login	Login	400	Invalid Request Body	Invalid Request	Login cannot be performed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
User Login	Login	500	Unable to connect to the server : <error message>	Authentication	User cannot login into 4Sight	The log directory and log file name will be defined in "4sight.cfg"	Please verify UMFP services are up and running
Widget	Delete Multiple Widget	500	SQLAlchemyError : <error message>	SQLAlchemyError	Widget details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema

Widgets	Create Widget	400	Invalid widget name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_' in between	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget name
Widgets	Create Widget	400	Invalid Request Body : <error message>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid dataset	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid widget name	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide valid Widget name
Widgets	Create Widget	400	Widget name already exists	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Provide different Widget name
Widgets	Create Widget	400	Invalid dimension column <column id>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid metric column <column id>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Create Widget	400	Invalid metric aggregation function <aggregation function>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid aggregation function for column <column name>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Script cannot be empty	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Custom label for script cannot be empty	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid start time	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid end time	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Create Widget	400	Invalid sort order	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid sort field	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid sort aggregation function <aggregation name>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid sort type	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	400	Invalid Filter:<Filter Name>	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid filters as mentioned in Filter syntax
Widgets	Delete Multiple Widget	400	Unable to delete widget '<widgetname>'. Widget is used in Dashboards	Invalid Request	Widget cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the Widget is used in Dashboards cannot be deleted. If the Widget has to be deleted, then delete all the associated Dashboards before deleting the Widget
Widgets	Delete Widget	400	Invalid Query Parameters	Invalid Request	Widget cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Export Widget	400	Invalid Request Body : <error message>	Invalid Request	Widget cannot be exported	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Get Attached Dashboards	400	Invalid Query Parameters	Invalid Request	Dashboard details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Get Graph Data	400	Invalid Query Parameters	Invalid Request	Widget Details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Get Widget Details	400	Invalid Query Parameters	Invalid Request	Widget Details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Import Widget	400	Invalid Request Body : <error message>	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the config schema
Widgets	Import Widget	400	Invalid dataset	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the dataset name in the config
Widgets	Import Widget	400	Invalid Dataset Column	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the column names in the config
Widgets	Import Widget	400	Widget name already exists	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Provide different Widget name
Widgets	Preview Widget	400	Invalid widget name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_', in between	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget name

Widgets	Preview Widget	400	Invalid Request Body : <error message>	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid dataset	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid widget name	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in " 4sight.cfg"	Provide valid Widget name
Widgets	Preview Widget	400	Invalid dimension column <column id>	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid metric column <column id>	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid metric aggregation function <aggregation function>	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in " 4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Preview Widget	400	Invalid aggregation function for column <column name>	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Script cannot be empty	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Custom label for script cannot be empty	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid start time	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid end time	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid sort order	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Preview Widget	400	Invalid sort field	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid sort aggregation function <aggregation name>	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Preview Widget	400	Invalid sort type	Invalid Request	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid widget name. Name should start & end with alphabets or numbers and it can contain space & special charecters like '-', '_' in between	Invalid Request	Widget cannot be Updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget name
Widgets	Update Widget	400	Invalid Query Parameters	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid Request Body : <error message>	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Update Widget	400	Invalid dataset	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid widget name	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide valid Widget name
Widgets	Update Widget	400	Widget name already exists	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Provide different Widget name
Widgets	Update Widget	400	Invalid dimension column <column id>	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid metric column <column id>	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid metric aggregation function <aggregation function>	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid aggregation function for column <column name>	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Update Widget	400	Script cannot be empty	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Custom label for script cannot be empty	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid start time	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid end time	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid sort order	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid sort field	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details

Widgets	Update Widget	400	Invalid sort aggregation function <aggregation name>	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Update Widget	400	Invalid sort type	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Widgets	Create Widget	500	SQLAlchemyError : <error message>	SQLAlchemyError	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Widgets	Delete Widget	500	SQLAlchemyError : <error message>	SQLAlchemyError	Widget cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Widgets	Get Graph Data	500	ElasticsearchException - <error message>	Elasticsearch Exception	Graph Data cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Widgets	Get Graph Data	500	KeyError - <error message>	Elasticsearch Exception	Graph Data cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Widgets	Get Widget Counts	500	SQLAlchemyError : <error message>	SQLAlchemyError	Widgets count cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Widgets	Import Widget	500	SQLAlchemyError : <error message>	SQLAlchemyError	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Widgets	Preview Widget	500	ElasticsearchException - <error message>	Elasticsearch Exception	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Widgets	Preview Widget	500	KeyError - <error message>	Elasticsearch Exception	Widget cannot be previewed	The log directory and log file name will be defined in "4sight.cfg"	Check the logs for Elasticsearch exception and verify it with Elasticsearch Index
Widgets	Update Widget	500	SQLAlchemyError : <error message>	SQLAlchemyError	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Widgets	Import Widget	400	Invalid Model	Invalid Request	Config cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Verify the Model name in the config

Widgets	Get Graph Data	400	Invalid Request Body	Invalid Request	Graph Data cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dashboards	Delete Multiple Dashboard	500	SQLAlchemyError : <error message>	SQLAlchemyError	Dashboard details cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Dashboards	Delete Multiple Dashboard	400	Invalid Request Body	Invalid Request	Dashboard cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Predictions	Delete Multiple Prediction	500	SQLAlchemyError : <error message>	SQLAlchemyError	Prediction models cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Verify the Database and table schema
Predictions	Delete Multiple prediction	400	Invalid Request Body	Invalid Request	Prediction models cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Dataset	Get Dataset Details By Id	400	Invalid request format	Invalid Request	Dataset details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Dataset	Get Dataset Details By Id	400	Invalid dataset id	Invalid Request	Dataset details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Dataset	Get Dataset Columns By Id	400	Invalid request format	Invalid Request	Dataset columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Dataset	Get Dataset Columns By Id	400	Invalid dataset id	Invalid Request	Dataset columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Dataset	Delete Dataset	400	Invalid request format	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Dataset	Delete Dataset	400	Invalid dataset id	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Dataset	Update Dataset	400	Invalid request format	Invalid Request	Dataset cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id

Dataset	Update Dataset	400	Invalid dataset id	Invalid Request	Dataset cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Widgets	Update Widget	400	Invalid request format	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget id
Widgets	Get Attached Dashboards	400	Invalid request format	Invalid Request	Attached dashboards cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget id
Widgets	Get Widget Details	400	Invalid request format	Invalid Request	Widget details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget id
Widgets	Get Graph Data	400	Invalid request format	Invalid Request	Graph data cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget id
Widgets	Delete Widget	400	Invalid request format	Invalid Request	Widget cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid widget id
Dashboards	Update Dashboard	400	Invalid request format	Invalid Request	Dashbaord cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dashboard id
Dashboards	Update Dashboard	400	Invalid dashboard id	Invalid Request	Dashboard cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dashboard id
Dashboards	Get Dashboard Details	400	Invalid request format	Invalid Request	Dashboard details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dashboard id
Dashboards	Delete Dashboard	400	Invalid request format	Invalid Request	Dashboard cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dashboard id
Dashboards	Delete Dashboard	400	Invalid dashboard id	Invalid Request	Dashboard cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dashboard id
Search	Get Dataset Columns By Id	400	Invalid dataset id	Invalid Request	Dataset columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Search	Get Dataset Columns By Id	400	Invalid request format	Invalid Request	Dataset columns cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid dataset id
Search	Update Search	400	Invalid request format	Invalid Request	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid search id
Search	Update Search	400	Invalid search id	Invalid Request	Search cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid search id
Search	Get Search Details	400	Inavlid request format	Invalid Request	Search details cannot fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid search id
Search	Delete Search	400	Inavlid request format	Invalid Request	Search cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid search id
Alert	Update Alert	400	Invalid request format	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid alert id
Alert	Update Alert	400	Invalid alert id	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid alert id

Alert	Delete Alert	400	Invalid alert id	Invalid Request	Alert cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid alert id
Alert	Delete Alert	400	Invalid request format	Invalid Request	Alert cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid alert id
Alert	Get Alert Details	400	Invalid request format	Invalid Request	Alert details cannot fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid alert id
Alert	Get Alert Details	400	Invalid alert id	Invalid Request	Alert details cannot fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid alert id
Predictions	isModelRunning	400	Inavlid request format	Invalid Request	Model details about running cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Update Prediction Model	400	Inavlid request format	Invalid Request	Prediction model cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Update Prediction Model	400	Invalid model id	Invalid Request	Prediction model cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Get Prediction Model Details	400	Invalid request format	Invalid Request	Prediction model details cannot fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Get Prediction Model Details	400	Invalid model id	Invalid Request	Prediction model details cannot fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Delete Prediction Model	400	Invalid request format	Invalid Request	Prediction model cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Delete Prediction Model	400	Invalid request format	Invalid Request	Prediction model cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Get Model Metrics Value	400	Inavlid request format	Invalid Request	Model metrics value cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Is Model Trained	400	Inavlid request format	Invalid Request	Model training details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Predictions	Get PredictionModel Params By Id	400	Inavlid request format	Invalid Request	Prediction model params cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please provide valid model id
Alert	Create Alert	400	TimeRange can be applied in Alerts only if time field selected in dataset	Invalid Request	Alert cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Alert	Update Alert	400	TimeRange can be applied in Alerts only if time field selected in dataset	Invalid Request	Alert cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Alert	Import Alert	400	TimeRange can be applied in Alerts only if time field selected in dataset	Invalid Request	Alert cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Widget	Create Widget	400	TimeRange can be applied in Widgets only if time field selected in dataet	Invalid Request	Widget cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Widget	Update Widget	400	TimeRange can be applied in Widgets only if time field selected in dataet	Invalid Request	Widget cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field

Widget	Import Widget	400	TimeRange can be applied in Widgets only if time field selected in dataet	Invalid Request	Widget cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Widget	Preview Widget	400	TimeRange can be applied in Widgets only if time field selected in dataet	Invalid Request	Graph details cannot be fetched	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Predictions	Create PredictionModel	400	Dataset without timeRange field cannot used for predictions	Invalid Request	PredictionModel cannot be created	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Predictions	Update Prediction Model	400	Dataset without timeRange field cannot used for predictions	Invalid Request	PredictionModel cannot be updated	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
Predictions	Import Prediction Model	400	Dataset without timeRange field cannot used for predictions	Invalid Request	PredictionModel cannot be imported	The log directory and log file name will be defined in "4sight.cfg"	Please select dataset having timeRange field
User	Get users	401	Invalid User	Invalid Request	Publish artifact option cannot be accessible.	The log directory and log file name will be defined in "4sight.cfg"	User has to assign as admin in keycloak.
Widgets	Delete Multiple Widget	400	Invalid Request Body	Invalid Request	Widget cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Search	Delete Multiple Search	400	Invalid Request Body	Invalid Request	Search cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Alerts	Delete Multiple Alert	400	Invalid Request Body	Invalid Request	Alert cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Datasets	Delete Multiple Dataset	400	Unable to delete dataset '<datasetname>'. Dataset is used in Search	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the Dataset is used in Search cannot be deleted. If the Dataset has to be deleted, then delete all the associated Searches before deleting the Dataset

Datasets	Delete Multiple Dataset	400	Unable to delete dataset '<datasetname>'. Dataset is used in Widgets	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the Dataset is used in Widget cannot be deleted. If the Dataset has to be deleted, then delete all the associated Widgets before deleting the Dataset
Datasets	Delete Multiple Dataset	400	Unable to delete dataset '<datasetname>'. Dataset is used in Alerts	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the Dataset is used in Alert cannot be deleted. If the Dataset has to be deleted, then delete all the associated Alerts before deleting the Dataset
Datasets	Delete Multiple Dataset	400	Unable to delete dataset '<datasetname>'. Dataset is used in Prediction	Invalid Request	Dataset cannot be deleted	The log directory and log file name will be defined in "4sight.cfg"	If the Dataset is used in Prediction cannot be deleted. If the Dataset has to be deleted, then delete all the associated Prediction before deleting the Dataset

4Sight ML

Model queue	Check model queue	400	Invalid Query Parameters	Invalid Request	Model queue details cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Model queue	Check model queue	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model queue details cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the Database and table schema
Model queue	Add model to queue	400	Invalid Query Parameters	Invalid Request	Model detail cannot be added to the queue	The log directory and log file name will be defined in "4sight_ml.cfg"	If the issues happens from UI, it means 4Sight-UI and 4Sight-Server is not in sync. Please verify whether both the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Model queue	Add model to queue	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model detail cannot be added to the queue	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the Database and table schema
Predictions	Get predictions	400	Invalid Query Parameters	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Please verify the request details. Refer API documentation for details
Predictions	Get predictions	400	Model Name does not exist	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Pass valid model name

Predictions	Get predictions	400	Invalid request body data	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the request body
Predictions	Get predictions	400	Invalid date format	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the request body
Recommendations	Get Recommendations	400	Invalid Query Parameters	Invalid Request	Recommendations cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Please verify the request details. Refer API documentation for details
Recommendations	Get Recommendations	400	Model Name does not exist	Invalid Request	Recommendations cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Pass valid model name
Recommendations	Get Recommendations	400	Invalid request body data	Invalid Request	Recommendations cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the request body
Association	Get Associations	400	Invalid Query Parameters	Invalid Request	Associations cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Please verify the request details. Refer API documentation for details
Association	Get Associations	400	Model Name does not exist	Invalid Request	Associations cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Pass valid model name
Association	Get Associations	400	Invalid request body data	Invalid Request	Associations cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the request body
Train Model	Model Training	500	SQLAlchemyError : <error message>	SQLAlchemyError	Model training will not happen	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the Database and table schema
Evaluation metrics	Get Evaluation Metrics of a Model	400	Invalid Query Parameters	Invalid Request	Evaluation metrics of the model cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	If the issues happens from UI, then please verify whether the binaries are valid. If it is not from UI, then please verify the request body. Refer API documentation for details
Evaluation metrics	Get Evaluation Metrics of a Model	500	SQLAlchemyError : <error message>	SQLAlchemyError	Evaluation metrics of the model cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the Database and table schema
Predictions_client	Get predictions	400	Invalid Query Parameters	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Please verify the request details. Refer API documentation for details
Predictions_client	Get predictions	400	Model Name does not exist	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Pass valid model name
Predictions_client	Get predictions	400	Invalid request body data	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the request body
Predictions_client	Get predictions	400	Invalid date format	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Verify the request body
Predictions	Get ML Prediction Model details	400	Invalid request format	Invalid Request	Predictions cannot be fetched	The log directory and log file name will be defined in "4sight_ml.cfg"	Please provide valid model id
